

SUPER CONCENTRATED DIESEL STABILITY TREATMENT

FOR LONG-TERM STORAGE STABILITY

PRI-D is a super concentrated diesel treatment that preserves the physical and thermal stability qualities of all diesel fuels in long-term storage. For any fuel that has already suffered the effects of degradation, **PRI-D** can also be applied to restore the fuels to refinery freshness. With greatly improved physical and thermal stability:

- Keeps fuel fresh for months and even years
- Restores degraded fuels to freshness
- Ignition quality is preserved and enhanced
- Engines perform better and last longer
- Power is increased and fuel economy realized
- Engines start quickly and operate reliably
- Fuel filters remain cleaner, requiring fewer costly changes
- Tanks and fuel lines remain free of slime and sludge
- Smoke opacity is dramatically reduced

Keeps Fuel Fresh and Ready To Use – It's a fact: Today's modern hydrotreatment refining processes produce diesel fuels that have a tendency to deteriorate in storage at rates much faster than years ago. Over time, ignition quality deteriorates, resulting in harder starts. Fuel systems and filters are compromised. Damaging fuel system and engine deposits prematurely advance engine wear. **PRI-D** works chemically within diesel fuel to maintain and improve fuel freshness, extending storage life for months, even years at a time. Even most severely degraded fuels can be restored to a refinery-fresh condition with **PRI-D** – a capability confirmed in independently conducted ASTM D2274 Accelerated Stability Tests.

Optimum Performance - **PRI-D** maintains peak ignition quality. With the improved combustion of **PRI-D** treated fuel, you will realize *increased power from your engine*. At the same time, you will enjoy *greater fuel economy*. **PRI-D** is also extremely effective at reducing harmful emissions.

Reduced Maintenance Costs – **PRI-D** is a highly effective preventative maintenance tool. **PRI-D**'s proprietary, refinery-grade chemistry is unsurpassed at preventing carbon deposits and fuel system fouling. Your engine will remain cleaner and last longer. In addition, the tank slime and sludge that diesel fuel users commonly encounter is eliminated, along with frequent and costly fuel filter changes.

Bottle Size	Diesel Fuel Treated
16 Ounces	256 gallons
32 Ounces	512 gallons
1 Gallon	2,000 gallons

Super Concentrated – **PRI-D** is super concentrated, treating fuel at a 1:2,000 ratio. This means **PRI-D** is extremely cost effective to use. Get the most out of your diesel fuel for only pennies a gallon.

Safe To Use – **PRI-D**'s *enhanced thermal stability chemistry* works within the fuel instead of altering it, which means the product is completely safe to use. **PRI-D** contains no potentially damaging cetane improvement additives or harsh solvent chemistries. No fuel specifications are changed, therefore **PRI-D** meets all major engine manufacturer fuel specifications – warranties are not voided! Use **PRI-D** today to get the most out of your diesel fuel and your engine.
