A customer's experience...

"I just wanted to state how impressed I am with your product. I purchased a 1988 10 Meter Trojan last year with very low hours. Do to the low hours I was confronted with more than my fair share of old fuel problems, including carbs and sludge in the fuel tanks. I did rebuild the carbs, but to no success. The sludge in the tanks kept giving me problems after the vessel was running for more than a half hour or so.

Last weekend I had to run my boat from Winthrop Harbor, IL, to Racine, WI, for winter storage, of which I was nervous, even though it was a short trip. While picking up some last minute items from my usual boat service facility, Marine Specialist in Winthrop Harbor, he suggested I try a new product he just got in. This new product was your fuel treatment for gas engines. So that afternoon I went to fill-up for the winter and added you fuel treatment to my tanks before leaving for Racine. In the year and a half I have had the boat, she has never ran so good. With-in 20-minutes of being on the lake, I noticed considerable differences. She ran trouble free all the way to Racine, WI, for the first time since I purchased the boat. The trip normally takes me about 1 hour or more, but the boat was running so nice, I was able to throttle up without bogging and make the trip in 45 minutes. Once I got to Racine, I turned the boat around and went back out on the lake for another trouble free run. Again very impressed.

It's not often you buy a product that actually does what it claims. Can't wait until next year,
HAPPY BOATING TO ALL."
