Subject: #2 Fuel Oil Treatment

Christopher Ramirez,

I would like to thank you for the on going help with the treatment of the #2 fuel oil on base. When I started here at Sandy Hook, NJ four years ago; the fuel and fuel tanks on base were in bad shape. With twenty two 300gallon tanks, the importance to correct the fuel quality was high priority. When I contacted you for help, you were very educational on the situation I was facing. You pointed us to the cost effective solution of using PRI-D as fuel treatment. This saved us over twenty thousand dollars by not having to dispose of the bad fuel. Now with regular fuel treatment we have reduced boiler maintenance due to less soot and fuel sludge. I look forward to your assistance and knowledge with our fuel treatment needs.

Thank you,

Nick Hilarczyk
